Summary

Backend focused Computer Science undergraduate with full stack shipping experience across FastAPI, React, and Next.js. Comfortable working end to end, from data modeling and API design to wiring up frontend interfaces and AI integrations. HNG11 finalist with hands on experience in agile teams, async workflows, and CI/CD.

Experience

Software Director

07/2025 – Present

Communication and Information Sciences Students Association

- Led end to end development of the CISSA faculty website using FastAPI and Next.js, delivering a responsive, admin managed system for students and faculty
- Set technical strategy and oversaw development workflows for the faculty's tech arm
- Mentored student engineers and supported technical execution across association projects

Backend Engineer Intern

07/2024 – 08/2024

HNG Internship (HNG11)

- Contributed to backend systems powering two production level web applications using FastAPI
- Designed asynchronous workflows with Celery and RabbitMQ, improving processing speed by 20%
- Implemented JWT and OAuth2 authentication and strengthened code reliability with unit testing (Pytest)
- Assisted with Docker based deployment and collaborated with cross functional agile teams

Backend Engineer

03/2024 – Present

Freelance

- Built a fundraising platform with JWT auth, student email verification, and Paystack integration for online donations
- Maintained CI/CD pipelines with GitHub Actions for efficient environment management

Projects

Formbrew

2026

Next.js, React, FastAPI, PostgreSQL, Groq API

- Built a full stack AI form builder that creates, publishes, and manages forms from natural language prompts, with a Next.js and React frontend and a FastAPI and PostgreSQL backend
- Designed an instruction based editing engine where the LLM emits structured edit operations (add/edit/remove/reorder) that the backend applies deterministically, cutting output tokens and eliminating broken or empty form states
- Implemented conversational refinement with edit tracking, detecting manual UI edits between prompts and folding them back into LLM context
- Shipped public form sharing with anonymous responses, response analytics with per-question answer distributions, and JWT auth with automatic token refresh
- Documented the build in a public devlog series (franklin-ikeh.vercel.app/writing) covering data modeling, LLM integration, and instruction based editing
- Live: formbrew.vercel.app

Kwiki AI: AI Powered Flashcard Generator

2024

FastAPI, React, PostgreSQL, Groq API

- Built an AI driven flashcard app with a FastAPI backend and React frontend
- Integrated OAuth2 and JWT authentication, with CI/CD via GitHub Actions
- 40+ registered users, 500+ flashcards generated

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS
Frameworks: FastAPI, Next.js, React, Django, Tailwind CSS
Databases: PostgreSQL, SQLite, MySQL, Redis
Tools: Git, GitHub Actions, Docker, Celery, RabbitMQ, Linux, uv
Concepts: RESTful API design, asynchronous processing, CI/CD, microservices, TDD

Education

B.Sc. Computer Science 2023 – 2027
University of Ilorin
Current grade: 2:1 (Upper Second Class)

Organisations

Core Team Member, Technical Innovation and Development 09/2025 – Present
Google Developer Groups on Campus, University of Ilorin
